

Having an opportunity to eat lunch is critical to academic success, but is a luxury in many places in Haiti. The school lunch is currently cooked outside or in a makeshift shelter made of tarps and metal sheeting.

THE KITCHEN PROJECT

The SUNY Broome Engineering Club is teaming up with Health for Haiti to design a solar kitchen for a rural school in Grande Saline, Haiti, and to raise funds to help the community purchase the materials needed for constructing a proper school kitchen for storing food, dishes, and utensils, and for preparing and serving meals.
