

Health for Haiti provides clean water

March 20, 2015

The Health for Haiti team has completed installation of the water filtration system in Grande Saline, Haiti. The system is providing the community with 6,000 gallons of clean water each day. Thank you to all of the Health for Haiti students and the entire SUNY Broome community for making this project possible.

We are now accepting applications for our 2016 class. For more information, please visit our website: www.healthforhaiti.wordpress.com.
